

**The Specification:**

Please amend the paragraph that starts at Line 8 on Page 6 as follows:

Turning now to Figure 2C, there is illustrated an alternate network topology user ~~display 210~~ display 216 showing a more detailed connection between server 202 and workstation 204 according to a different level of abstraction. User ~~display 210~~ display 216 selectively depicts the network topology represented in repository 102 by displaying individual links 218, 220 and 222. In this alternative embodiment, the individual links 218, 220 and 222 represent the specific protocols running on the various levels of the “stack” representation of the network, namely Internet Protocol (“IP”), Transmission Control Protocol (“TCP”), and File Transfer Protocol (“FTP”), respectively.
